

3D/4D/HD Ultrasound Guidelines by Precious Glimpse

Gestational Week	6 - 12 Weeks	12 - 20 weeks	21- 25 weeks	26-32 weeks (Optimal period)	33 - 39 Weeks
Image description	Full-Body	Full-Body	Half-Body	Facial Only	Limited Facial features
<p>HD ULTRASOUND Image Example</p>					

<p>Pros</p>		<p>Full body image, can see arm, legs and face. Incredible upgrade from the black and white 2D Ultrasound</p>	<p>Can get images of baby from mid section to face, include chest and shoulders. Hands and feet can be seen.</p>	<p>Baby is larger with more fat layers hence shows more fuller development and detailed facial features.</p>	<p>Baby is further along in development and more detailed features and expression can be seen.</p>
<p>Cons</p>		<p>Baby is still small and not fully developed yet. Soft facial images seen. The image may appear not as vivid or detailed because of the early stage development</p>	<p>Baby is still small and not fully developed yet. Soft facial images seen. The image may appear not as vivid or detailed because of the early stage development.</p>	<p>Facial features only.</p>	<p>Baby is alot bigger with limited space to move. Limited facial features.</p>
